High Speed Video - as fast as easy

+++ The new SpeedCam MiniVis ECO-1 and ECO-2 +++

The two brand-new versions MiniVis ECO-1 and ECO-2 offer a maximum of flexibility in resolution and speed and are based on the SpeedCam MiniVis.

The sophisticated systems enhance the tried and tested SpeedCam camera family from Weinberger in two respects, since in addition to the enhancement of the new application areas a further price segment is opened up with the MiniVis ECO-1 / ECO-2. In fact: The ECO versions are really clever alternatives for all applications in the non HI-G range, since in the form of the ECO-2 they offer optical performance features which are identical with the SpeedCam MiniVis basic model.

Up to 500 frames per second can be recorded with the maximum resolution of 1.280 x 1.024 pixels. A recording speed of up to 32.000 frames/second is possible with reduced resolution. The ECO-1 has a maximum resolution of 640 x 512 pixels and delivers an frame rate of up to 1.000 frames/second while doing so.

Further equipment features are the long recording times of up to 6 seconds with full resolution as well as the integrated battery, which enables autonomous operation without external power supply.

All adjustments can be made from a Windows PC or laptop by means of the comfortable Visart control software. As a result, the portable ECO versions are optimally suitable for most applications in the field of research, development, production and quality assurance - wherever a mechanical stability of 100g is not necessary.

Service

Rent-a-Cam by Weinberger

+++ Service concepts for your application +++

The demand for an analysis by means of high-speed video technology does not always justify the investment in one's own system. This is why you can also rent our user-friendly high-speed cameras.

If so desired we also offer the recording of your application in the form of a business service. In this case an operator accompanies you throughout your entire analysis project and is helpful to you in the preparation, setup, recording and evaluation.

many problems in the realm of research, development and production can be solved fast by means of our high-speed video analysis.

Does a fast-running machine produce too much wastage? Find out the cause with super slow motion from weinberger!

Projects

Cine SpeedCam

+++ Exciting shoots for film, television and advertising +++

With the Cine SpeedCam Weinberger has been able to impressively prove that in terms of excellent image quality you are in the very best hands with Weinberger. Indeed, the Cine SpeedCam - the digital high-speed camera for all broadcast applications - is based on the successful SpeedCam Visario 1500.

This is why quite a few high-caliber shoots were able to realized with the help of Cine SpeedCam last year:

Special-effect recordings for the music video "Let's get it started" by the popular US band "The Black Eyed Peas", a cinema advertising spot for T-mobile (featuring Til Schweiger in the leading role) and US advertising clips for the firms Cadillac, Mikasa and Apple are to be particularly emphasized in this connection.

Yet another piece of successful news is the positive outcome of a test with the special-effects team from the US series sensation "CSI Miami". The effects masters are evidently enthused by the new possibilities which digital high-speed technology offers. The magic word here is once again "high-definition" (HD).

Products

SpeedCam Visario g2

+++ Promising market introduction +++

The new SpeedCam Visario g2 goes down well with the German automobile industry. The performance features in terms of image quality and network capability were particularly praised in the initial tests.

At Ford Germany, 12 new Visario g2 cameras in a crash test lab are already being utilized in an Ethernet Network that was established with components from the network manufacturer Cisco. The systems are controlled from two control rooms.

For more detailed information on the Visario g2, go to our homepage, call us or send an e-mail.

Cooperation

Weinberger - Messring

+++ Strategic Alliance +++

Two highly successful specialist companies in the crash-test sector, MESSRING SystembauMSG GmbH (Germany) and Weinberger AG (Switzerland), have just signed an exclusive distribution and service contract for the USA, Canada and Mexico.

Under the terms of the agreement, Weinberger Vision Technology Corp., Grand Blanc (Detroit), USA, a subsidiary of Weinberger AG, will take over immediately as the exclusive agent for all MESSRING products and services in North America. Previously, MESSRING has done all its American customer business directly from Munich.
